

Jadhav Ashvini Manohar

1. Write a program to check if a number entered by the user is even or odd.

```
In [4]: number = int(input("Enter the number :"))

if number % 2==0:

    print("the number is even")
else:
    print("the number is odd")
```

the number is even

2. Write a program to check whether a number is positive, negative, or zero.

```
In [5]: num = float(input("Enter the number:"))

if num >0:

    print('you gave a positive number')
elif num < 0:
    print('you gave a negative number')

else:
    print('zero')
```

you gave a negative number

3. Write a program that takes two numbers and prints the larger one.

```
In [5]: num1 = int(input('Enter the value for n1 :'))
num2 = int(input('Enter the value for n2 :'))

if num1 > num2:

    print(num1, ' is larger')
else:
    print(num2, 'is larger')
```

45 is larger

4. Ask the user to enter their age and check if they are eligible to vote (age >= 18).

```
In [8]: age = int(input("enter your age :"))

if age >= 18:

    print("you are eligible for vote")
else:
    print("you are not eligible for vote")
```

you are not eligible for vote

5. Check if a number is divisible by both 5 and 11.

```
In [9]: num = int(input('Enter the number :'))

if num % 5 == 0 and num % 11 == 0:

    print(f'{num} is divisible by both 5 and 11')
else:
    print(f'{num} is not divisible by both 5 and 11')
```

34 is not divisible by both 5 and 11

6.Check if a number is divisible by both 3 and 5.

```
In [3]: num1 = int(input('Enter the number:'))

if num1 % 3 == 0 and num1 % 5 == 0:

    print(f'{num1} is divisible by both 3 and 5')
else:
    print(f'{num1} is not divisible by both 3 and 5')
```

10 is not divisible by both 3 and 5
